**MODUSS SHOES**  
SAFETY OFFSHORE MEXICO

A.I. Loran International. LLC

MODUSS SHOES is our exclusive safety footwear brand that meets the highest quality standards, guaranteeing your safety.

We understand the paramount importance of protection in any working environment. That's why, at Moduss Shoes, we are dedicated to offering safety footwear tailored to diverse needs and requirements.

This catalog shows our workplace and protective safety footwear which we commercialize nationwide and that complies with its functionality featuring a protection aspect, besides its design and fabrication being 100% Mexican.

It incorporates special features to protect the user from injuries that may arise during their activities performance.

# Safety footwear categorization

## Category I.- Occupational footwear:

Meant to be used in workplace activities where the user is just exposed to minor risks, such as cuts, lacerations, bumps against objects, among others, that do not require any special protective feature.

## Category II.- Steel toe protection footwear:

Helps guard against impact and compression from heavy objects or equipment.

## Category III.- Composite toe protection footwear:

Polycarbonate reinforcement in the toe area which helps to guard against impact and compression. It also offers electrical hazard (EH) protection, ensuring it does not conduct electricity.

## Category IV.- Metatarsal Protection footwear:

Aimed to protect the foot's instep against impact risks to the metatarsus, in addition to covering category II footwear risks.

## Category V.- puncture resistant footwear:

Meant to protect the user's foot sole against sharp objects that could pierce through the shoe wear's sole.

# Glossary

All of our footwear is manufactured with the direct soling to the cut system, the best option for a high quality, durable industrial footwear.

**What's the direct soling?**

We manufacture using the direct soling technique which consists in attaching the outsole directly to the upper without any stitching.

## Toe Protection Styles

### polycarbonate toe protection:

Toe cap intended for activities where the user is exposed just to minor risks, such as cuts, lacerations, bumps against objects, among others, that do not require any special protective feature.

### Steel toe protection:

It's one of the most used on the industry, intended for a toes' integral protection where impact and compression risks exist.

### Composite Toe protection (Dielectric):

This toe cap gathers the steel toe's features (protection against impact and compression) adding a protection for the user against electric shock risks, as well as being lighter.

## Soles Styles

### Mono-density Sole:

This kind of sole is lighter and only used for flat floors or facilities such as factories, transportation, textile industry, automotive industry, etc. It's anti-slipping.

### Double-density Sole:

This sole is more resistant to abrasion and deterioration, that's why it's used for rough work, dirt roads or the metalworking industry. It's anti-slipping.

### Rubber Sole – RACN:

Acrylic-Nitrile. Double density with high resistance to abrasion, bending, oils, gasoline, low temperatures flexibility, anti-slip, traction and tearing resistance.

## Attachments/ Accessories

### WBFLEX Toe Box against abrasion:

It's made from WBFLEX material, which protects against toe abrasion and provides a better protection to the user.

### WBFLEX Style anti-puncture insole:

It protects the foot's sole against sharp piercing objects which could penetrate the shoe wear's sole. This attachment can be added upon request on any shoe model, starting from 10 pairs on.

**Reflective tape:** Reflects light in a mirror kind of way with a great shine and durability.

# STYLE 042 CAN

● Orange sole. 6" Boot

Safety 6 inch boot, manufactured in full grain Napa leather. With a high impact absorption ergonomic insole, anti-fatigue, breathable and antibacterial.

# Storage, Maintenance and Usage Conditions

**Safety Offshore of México, S.A. de C.V., guarantees this product for an up to 90 days period, counted from the delivering moment against fabrication defects; to make effective that due warranty, the user must follow the warranty process and use the footwear keeping up the storage and wearing conditions which will be consecutively detailed below:**

Moduss Shoes Brand Safety Footwear from Safety Offshore of México, S.A. de C.V., must be used in dry environments, without humidity and exclusively on the respective working areas during work day.

Therefore, keep in mind that the mono-density sole is meant to be used exclusively on flat floors or offices (unadvised for jobs with excessive abrasion such as civil constructions, metalworking, building, platforms maintenance, mining industry or maritime terminals). This kind of sole is recommended for the "clean" industry, such as factories, transportation, textile industry, automotive industry, etc. So, their use must be specifically for what's recommended.

The double density sole is used for rough working, it is advised to respect the recommended kind of use.

It is also advised to respect the corresponding and adequate use for each kind of toe cap, remembering that the steel toe protects toes against impact and compression and the polyamides one, against electric shocks, impact and compression.

The Moduss Shoes Shoe wear must be stored on well-ventilated places.

Long-term storage may deteriorate certain materials in very humid and dark places or weather.

Moduss Shoes Shoe wear requires a periodic cleaning and maintenance in accordance with usage frequency, specifically those exposed to long-term work days in extreme conditions must be cleaned with a damp cloth and polished (applying of regular shoe polish).

Safety Offshore of México, S.A. de C.V., does not take responsibility for any kind of damage caused on account of misuse, negligence or accidents related to its usage.

The logo consists of two overlapping, curved lines that form a partial circle or ring shape, centered above the company name.
